

# GlobalMeterManager

## System software for the configuration of Minol-ZENNER devices and for meter data management

The new system software by ZENNER offers exactly the suitable function range for each case of application. It doesn't matter whether device parameterization or commissioning of remote reading systems - with the innovative concept, to concentrate components into so-called function packages, you can licence the package matching for the application. All package licences are single workplace licences.

### ConfigurationManager

The smallest software package is used for the programming of the Minol-ZENNER devices zelsius and multidata type WR3 resp. Minocal. The components AsyncCom and Designer are contained.

- Direct connection through optical head or by point-to-point communication
- Configurations of zelsius and multidata or Minocal devices

### ServiceManager

With this package bus systems can be commissioned and the selected data can be stored in a simple manner. It contains additionally to the ConfigurationManager the component DeviceCollector.

- Connection to bus systems and installation of bus units (searching for and allocating addresses)
- Read out of device data made available through the M-Bus telegram
- Saving of bus information as well as the read data in files
- Export formats ZDF, CSV and XLS

### System requirements (for use on PC)

- Windows XP SP2 with Administrator rights
- NET Framework 3.5
- 100 MB available hard disk space
- Processor of X86 family with 300 megahertz clock speed or higher
- 256 MB RAM
